Are you at risk for Hepatitis A?

People who are at high risk include:

- Men who have sex with men (MSM)
- People who use illegal drugs
- People currently homeless or in transient living
- People recently in jail or prison
- People with underlying liver disease*

Ask your doctor about vaccination if you are at high risk.

The best way to protect against hepatitis A is to get the hepatitis A vaccine.

^{*}Note: people with underlying liver disease (e.g., cirrhosis, hepatitis B, or hepatitis C) are at increased risk of having poor outcomes if they are infected with hepatitis A.
